

# Controltech, Inc. Now Representing O'Brien in Northern CA and Nevada

## St. Louis-OBP

O'Brien Corporation is very pleased to announce the appointment of CTi Controltech as the exclusive O'Brien Representative in the Northern California and Northwestern Nevada markets. CTi Controltech will represent O'Brien Corporation's family of products including Tracepak preinsulated electric/steam traced tubing bundles, Vipak enclosures, Saddlepak instrument stands, and Flexpak insulated flexible instrument covers.

CTi Controltech and O'Brien each have earned a reputation for having dependable products and solid field support. We are confident that this new partnership will be another step in that same direction. With local sales and technical support, we know that CTi Controltech will be ready to meet your needs throughout the upcoming years. Should you have any questions please don't hesitate to contact O'Brien or CTi Controltech. Please address all inquires to:

## O'Brien provides process accuracy through heat transfer expertise

O'Brien is a manufacturer of pre-insulated tubing bundles, instrument enclosures, and instrument supports. The tubing bundles offer freeze protection and temperature maintenance to impulse, process, and sample lines. Single and multiple lines are available with

steam and electric heat tracing. Rigid and flexible enclosures are available for freeze protection, temperature maintenance, and mechanical protection for process instrumentation. A wide range of instrument supports, mounts, and brackets are also offered.

O'Brien offers an extensive scope of standard options but is willing to design custom products as applications demand. With over forty years of industry experience O'Brien offers expertise and creative solutions for industrial applications.

## [www.tubingbundle.com](http://www.tubingbundle.com) - New interactive website allows customers to design their own TRACEPAK tubing bundle systems

O'Brien has launched their newest interactive Internet site and customer comments are extremely positive! Not only does the site provide an excellent tutorial on the concepts behind tubing bundles, it also allows the customers to enter

their exact application requirements such as desired maintenance temperature, Zone, ambient, circuit lengths, etc., and provides a very detailed product recommendation and performance statistics.
