

Plus a Lifetime Warranty

We now offer an unprecedented, application-specific PERFORMANCE GUARANTEE on our metal-seated isolation and control valves.

Most industrial severe service valve “warranties” are limited to material and workmanship for at least one year — **Big deal.**

We offer a PERFORMANCE GUARANTEE on each valve, plus a Lifetime Warranty on material and workmanship — **Big difference.**

How This Works

MOGAS will repair or replace valves at no charge should inspection indicate the valves have had external leakage or did not perform its intended purpose because of internal leakage during the application specific, pre-determined time period.

The PERFORMANCE GUARANTEE applies as long as valves have been registered online with MOGAS prior to installation and:

- The valve meets MOGAS' application specifications
- The valve is operated within the intended design and operating parameters provided to MOGAS
- The valve is installed and operated properly per MOGAS Operation and Maintenance Manual
- MOGAS is contacted within 48 hours should a performance problem occur
- This guarantee does not cover deterioration from corrosion

The PERFORMANCE GUARANTEE is activated by registering the valve online within 90 days of shipment from the MOGAS factory. If not registered within 90 days, coverage will default to the standard MOGAS Lifetime Materials & Workmanship Warranty only.

How Long Valves are Guaranteed

The length of the PERFORMANCE GUARANTEE will be determined by the application itself and the customer's specific needs. In other words, years of valve operating data and the specific application conditions will drive the provisions of the PERFORMANCE GUARANTEE. Pre-set individual time periods are recommended for each specific process.

How We Can Make This Offer

We are able to offer this important change due to more than 38 years of R&D, coating improvements, proven manufacturing techniques and application experience. Years of continual valve performance analysis, field reports and statistical service data from around the globe provide the information required to guarantee a performance time period. This has always been our mission and purpose— *“to build and engineer the best performing severe service ball valves in the world, with market understanding and application specific focus”*. With the recent flood of newcomers to the severe service market, a PERFORMANCE GUARANTEE could actually be a longer time period than some competitors have been in existence or have had valves installed.

Additional Benefits

Our customers not only get a quality valve, they also get assistance with

- On-site Services (start-up and commissioning, field support, major shutdown planning)
- Managed Inventories
- Walkdown Evaluations
- Online Valve Management Program
- Certified Training

Bottom Line

We spend our time making the best performing severe service metal-seated valves—not necessarily the “cheapest” or the “only has to pass test at the factory” valves. That's not what we do. Instead, we supply **reliability**. We provide **dependability**. We offer **confidence**. We engineer, manufacture and support serious valves for serious applications.

And now, each valve also comes with a statistically driven, application-specific PERFORMANCE GUARANTEE with a Lifetime Warranty on materials and workmanship.
