CTi Controltech's capabilities includes Process Control expertise in field instrumentation, PLC/DCS control systems, continuous and batch processes, fieldbus, and information systems.

In addition, CTi Controltech has years of experience with Rockwell's hardware and software. We have long standing resale agreements with Rockwell & other leading control equipment suppliers.

Besides our experience in burner management and combustion controls, our staff of engineers and technicians has knowledge in multiple applications including evaporators, flash coolers, hot breaks, ball mills, thickeners, flotation cells, fermentation, tank farms, batching systems and numerous other process control applications. Our experience is also diverse across many industries, such as petrochemical, mining, food processing, water treatment, pharmaceutical and power to name a few.

Our involvement on projects fits our particular customer's requirements from supplying just the hardware to providing full project implementation. Our engineering services include:

- Turn Key Project Management
- CAD Generated Project Drawings
- Process Control Studies
- PLC/DCS Programming
- Custom Panel Design & Manufacture (UL, CSA, etc.)
- Fieldbus Design
- Onsite Support Services

Our personnel can ensure that your project will be implemented successfully, delivering a solution that will meet your expectations.

Whatever the application may be or whatever industry you may be in, CTi Controltech can help you with your toughest process control problems.
